Soft Skill

- Quick learner
- Excellent attention to detail
- Effective communication and collaboration
- Creative thinking and innovation
- Adaptability to evolving design trend
- Time management and project prioritization
- User-centric design approach
- Eagerness to learn and stay updated with industry trends

Objective:

Aspiring software engineer pursuing a Bachelor's degree in Computer Science and Design, with a passion for developing innovative applications. Equipped with foundational skills in programming and problem-solving, I am eager to contribute to real-world projects and further enhance my expertise in software development at Wise Work. Seeking to apply my technical knowledge and collaborate with experienced professionals to create impactful, AI-driven solutions.

Technical skills

- Proficient in programming languages: Python, C#.
- Basic knowledge of software development methodologies (Agile, Scrum).
- Familiar with debugging, testing, and ensuring software quality.
- Basic knowledge of web development frameworks and databases.
- Interest in AI and cloud computing technologies.

Certifications

- UI/UX Design Fundamentals Certification (futureskills - Adobe)
- Digital Skills: User Experience (Accenture)
- Figma Tool (Coursera)
- Python PROGRAMMING (PREPINSTA)

Experience (FREELANCER)

- Video Editor - TechWeed (Youtube channel)
- Edited and produced engaging social media videos resulting in increased followers and improved engagement
- website design.
- Designed more than 30+ templates for landing pages.

INTERNSHIP

1.NATIVEVA
- Created website landing pages, and contributed to the growth of the company.

Projects

1. Mobile App Prototype (Personal Project)

- Designed a mobile app prototype for a Food App using Figma
- Created user flows, wireframes, and interactive prototypes to visualize the user journey.

2. Portfolio Website (Personal Project)

- Developed a personal portfolio website to showcase design projects and skills.

3. Patient health care monitoring system(Academic Project)

- With this IoT project, which can monitor health at home itself ,and a user friendly website to monitor the results .This website can be accessed by the doctors too.
- It monitors heart rate, blood oxygen levels and updates the records continuously.

4. License plate detection using ML(Academic Project)

- It detects the number plate of the vehicle and run time in road or traffic.
- It gathers the information of the vehicle and displays it.
